2017+ Ford Raptor Fog Light Mounting Bracket Installation Guide

Thank you for your purchase of this custom-designed bracket for your 2017+ Ford Raptor! This kit utilizes both the factory and included hardware to mount the bracket to the vehicle.

Tools Needed: 8mm and 13mm socket wrench

1. Using a 13mm socket, loosen screw **A**. Do not fully remove the screw. Next, remove screw **B**.
2. Using an 8mm socket, loosen screw **C** from the strut. Do not fully remove the screw. After that, remove screw **D** from the strut.

See back for further instructions.

3. Slide the bracket in-between the bumper and the support (E). Using the stock mounting points, replace the original 13mm screw, only hand-tightening it.

4. Slide the other side of the bracket between the strut and the bumper (F). Using the stock mounting points, replace the original 8mm screw, only hand-tightening it.

5. Tighten the screws that were hand-tightened and retighten the screws that were loosened to secure the bracket.

6. Using the included hardware, attach your light bar or pods to the included bracket and then attach it to the base bracket.

7. Test thoroughly and aim your lights in the desired direction before tightening all mounting hardware. Please check your local laws and regulations for aiming, installation, and applicability.

Please contact **Diode Dynamics** should you have any questions about the installation or wiring process, at **314-205-3033** (9a-5p CST) or **contact@diodedynamics.com**.
